The PROCON connectors offers a good attenuation. With an insertion loss of <1,5 dB it outperforms the NATO specification (<2,5 dB).

PROCON is built according to MIL-DTL-83526/20 military standard.

PROCON has the advantage of being produced inhouse in Åled, Sweden which also means a stable delivery performance and we are able to promise shorter leadtimes.

Like the other connectors in the Micropol PROCON expanded beam family, it is compatible with other junior sized expanded beam connectors on the market.
